Counseling for the assessment and treatment of developmental disorders. From our research and professional experience, our group have obtained important improvements in assessment and intervention techniques in different socio-family, educational and clinical contexts.
Laboratory for registration of eye movements

Recording and analysis of eye movements sequences for tasks involving different levels of attention and information processing. Computerized tasks have been developed for assessing perception, memory, reading and reasoning.
Work done by our research team have resulted in the development of several scales related to school motivation (eg, ECA, CEPEA, SIACEPA), phonological awareness and early reading skills (eg, LolEva), adaptation to spanish of several questionnaires (eg, Chexi) and the design and online implementation of various assessment tools.
